Sahil Nair - 2017B5A71317H

Jatin Arora - 2018A7PS0551H

Rusabh Rakesh Parikh - 2018A7PS1217H

### Specifications

Window Size = 1000

Packet size = 798 Bytes

Timeout = 1 sec

### Performance in ideal network conditions

Data Received - 17548818 Bytes

Throughput - 260882.592 B/s

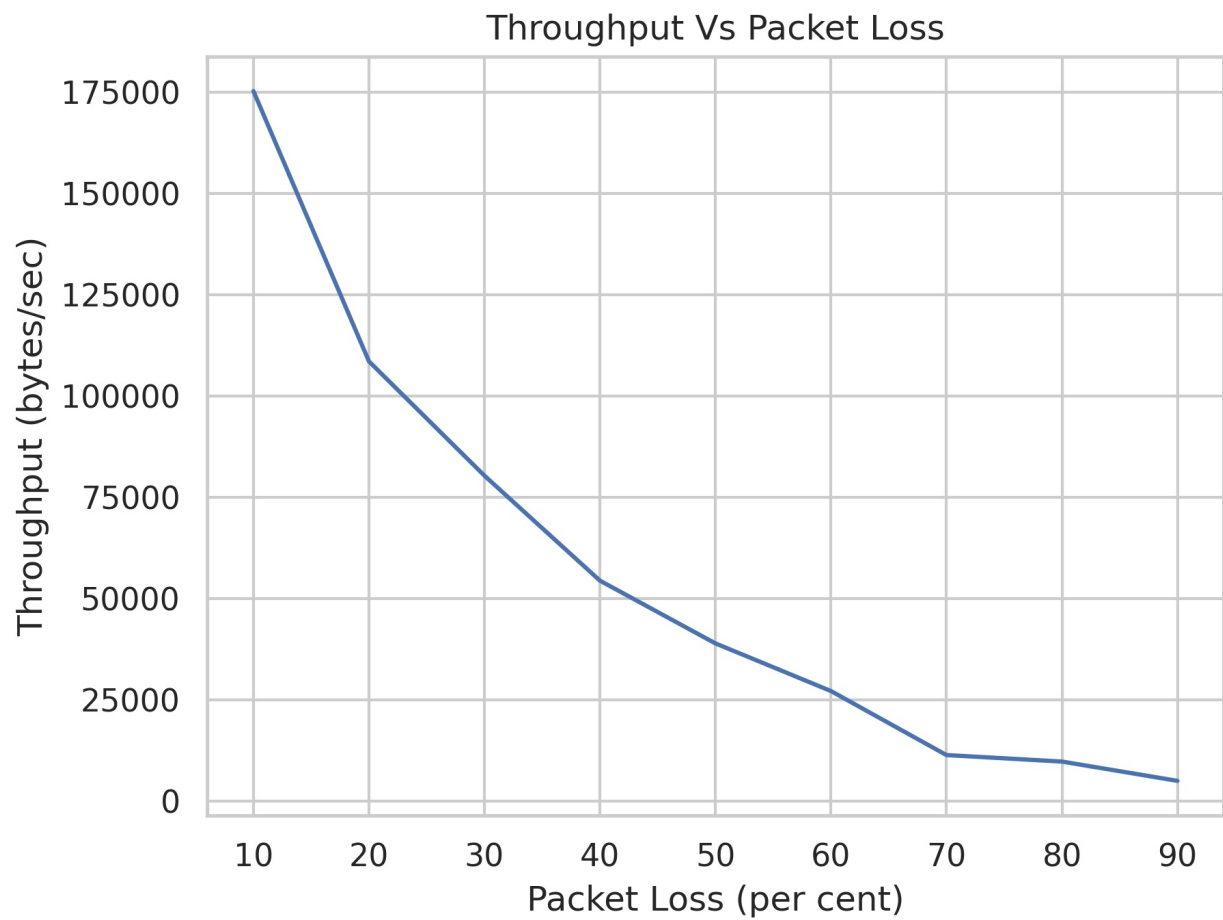

*Note* - The throughput depends on factors such as window size, timeout, and packet size.

### Performance in different network conditions

Under all following conditions, the protocol was able to transfer the file.

### 1. Throughput vs Packet Loss

Loss	Data Received (Bytes)	Throughput (Bytes/sec)
10%	11802420	175335.341
20%	7285740	108598.595
30%	5169444	80377.3173
40%	3818430	54453.2230
50%	2667714	38959.1231
60%	1884078	27199.8231
70%	846678	11391.5725
80%	815556	9787.32988
90%	799596	5023.36392

## 2. Throughput vs Packet Corruption

Corrupt	Data Received (Bytes)	Throughput (Bytes/sec)
10%	11483220	174357.064
20%	7922544	115792.938
30%	6127842	94528.6377
40%	4039476	58850.9139
50%	2982924	42503.8951
60%	1929564	25854.2246
70%	877800	11202.9047
80%	802788	7177.21253
90%	800394	4665.94561

### 3. Throughput vs Network Delay

Delay (ms)	Data Received (Bytes)	Throughput (Bytes/sec)
100	29035230	445471.128
200	19761672	304831.072
300	18892650	295029.843
400	22022406	336265.824
500	16208976	242162.979
600	16193016	243601.719
700	15837906	232744.110
800	11006814	168366.885
900	11572596	168811.209

#### 4. Throughput vs Packet Reordering

```
sudo tc qdisc add dev lo root netem delay <x>ms reorder 25% 50%
```

25% of packets (with a correlation of 50%) will get sent immediately, others will be delayed by x ms.

Delay (ms)	Data Received (Bytes)	Throughput (Bytes/sec)
100	31083696	475269.244
200	21849240	345567.574
300	22782900	359475.936
400	24370920	382492.052
500	16209774	237844.259
600	14357616	223006.513
700	12283614	184357.129
800	12742464	194916.180
900	13609890	201990.472
